Record 3DViewer

Future request

Is it possible to make a video of the 3D viewer

Implementation

First you need to create markers of the period you want video.

Then open the 3D viewer and press the "camrecorder" button.

Select the "Begin recording at" marker and the "End reording at" marker, Resolution and scale. You probably want to play a little with the resolution and scale for an optimal output.

Image: Contract of the second contract on tere of the second contract on t					
Begin recording at	• 0:13:20.263 line up •				
End recording at	0:15:25.033 start1 *	88			
Resolution	768 x 576 (PAL) -				
Scale	2,50 ‡				

If all is done, press the "Cam-record" button.

A save dialog is shown, give the output a name

Now the "videocompression" window is shown. This one is tricky. A lot settings won't work or don't give the outcome you wish. The settings shown in the screenshot will give you acceptable result, but don't expect too much.
